

# Ospa BlueCheck

## Monitoring and remote control by app

### Stay in the know with the Ospa BlueCheck app

The Ospa BlueCheck app allows you to monitor and control your Ospa water treatment system remotely from anywhere. You can heat up your whirlpool on your way home or make sure that everything is okay at home when you're away on holiday. The fully automated remote monitoring system keeps you updated with everything you need to know. Check the water parameters and other levels from your smartphone, tablet or computer. You can even adjust the temperature and filter system runtimes conveniently via the app. A few taps of the screen and you're good to go!

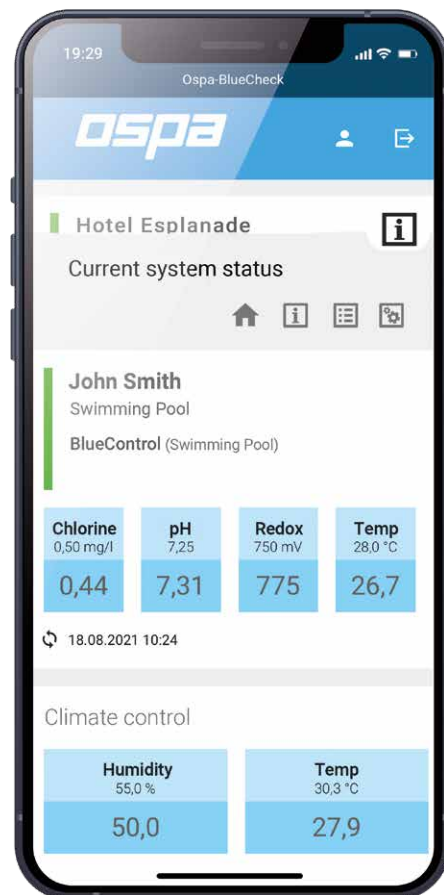

### Security first

The Ospa BlueCheck app is hosted centrally on cloud-based servers with firewall protection in the EU. You don't need to worry about the security of your home network being compromised either. Data transmission is encrypted and password-protected in line with EU data protection provisions – and that applies across all devices. So all that's left to do is relax and enjoy your smart pool.

### Beyond one pool

Do you have more than just a single swimming pool system to keep an eye on? At your holiday home perhaps? That's no problem for the Ospa BlueCheck app! Use it to monitor all your systems remotely and receive standby and fault notifications by email.

The Ospa customer service team or service partners can also take care of all that for you if you're a customer with a service contract.

## Ospa SmartPool technology

For pool owners and operators

For authorised Ospa service partners

For Ospa customer service staff

Encrypted data transmission in line with EU data protection provisions for added security

For smartphones, tablets and computers

For all Ospa BlueControl® and CompactControl units
