- BlueControl® controls all energy saving functions – for maximum cost-effectiveness

Maximum operating comfort

Fantastically easy

Fitness: 6 individual PowerSwim training programs for the entire family

Lighting: 9 lighting scenes for more lighting atmosphere in the pool

Wellness: Full control over the strength and runtime of water features

Energy efficiency: Reduces consumption of electricity and heating energy at the touch of a button

Comfort climate: Comfortable climate in the entire wellness area

Wellness water: fully automatic control of Ospa water quality

Ospa BlueControl® 5 Web

Discover the symbiosis of perfect convenience and maximum safety. The intelligent Ospa BlueControl® system fully automatically and precisely controls and monitors all functions of your swimming pool.

Water quality, water temperature, room climate, counter-current system and lighting – Ospa BlueControl® 5 Web unifies all functions in one device. With this innovative technology, you ensure that energy is saved and that all water values are always correct.

- Fully automatic control system with measurement station for chlorine, pH, redox value and temperature
- Simple, intuitive operation via 7" touch screen with graphical interface
- Minimal maintenance effort thanks to fully automatic control of all functions
- Integrated web server and Ethernet interface
- Optional interfaces for connection to KNX/EIB, Modbus-RTU or Crestron BMS systems

Ospa BlueControl® – measurement station

The Ospa measurement station with touch screen display records all water values and forwards them to BlueControl® over the Ospa swimming pool BUS. The Ospa measuring cell quickly and precisely determines the relevant values with its pH and redox electrodes, temperature sensor and Ospa-3-electrode chlorine measurement. Flow monitoring with the Ospa flow monitor provides additional security. A water testing set and buffer solution are also part of the equipment.

By smart phone, tablet or Internet

Mobile freedom

Whether comfortably on the living room couch, outside in the back yard, at hotel reception or full of anticipation at the office: with Ospa BlueControl® 5 Web, you can conveniently control your swimming pool via your WLAN. With your smart phone or tablet, you have access to your entire wellness oasis at the touch of a finger: Check the water values, control the air conditioning system or program your pool and room lighting, new lighting scenes and training programs. With the Ethernet interface, you can easily integrate your BlueControl® 5 Web into your network and enjoy freedom on the go.

- Convenient swimming pool control via tablet, smart phone or Internet
- Easy to integrate into your network
- Including GSM wireless modem for remote access

Mobile operating convenience for your wellness oasis

Ospa carefree package

Ospa system technology – Everything from one source

Ospa-BlueControl® Control Cabinet

The Ospa-BlueControl® control cabinet is the control center for all of the swimming pool technology. All information comes together here. Whether water treatment, lighting, climate control, covering or water features, all important functions and values of the system are automatically monitored and controlled. All electrical components are protectively housed in the ready-to-connect and factory inspected Ospa control cabinet. It's professional, and ensures a long service life.
